

# Problem Statement

Managing campus events in universities can be a complex and time-consuming process, often involving multiple stakeholders such as students, club heads, faculty, and management. The lack of a centralized system leads to inefficiencies, miscommunication, and delays in event approvals and organization.

Key challenges include:

**Inefficient Communication:** Event requests and approvals are often handled through emails or offline methods, leading to delays and lack of transparency.

**Role-Specific Needs:** Different stakeholders (students, club heads, faculty, and management) have unique requirements that are not addressed by a single platform.

**Event Tracking:** There is no streamlined way to track the status of event requests, approvals, and feedback.

**Scattered Information:** Event details, supporting documents, and feedback are often stored in multiple locations, making it difficult to access and manage.

**Limited Visibility:** Students lack a centralized calendar to view all upcoming events, leading to lower participation and engagement.

Proposed Solution

**UniEvent** aims to address these challenges by providing a centralized, role-based platform for managing campus events. It streamlines the event submission, approval, and publishing process while ensuring transparency and efficiency for all stakeholders.
